## 1. Propositional Practice

- (a)  $(\exists x \in \mathbb{R})(x \notin \mathbb{Q})$  is true with  $x = \sqrt{2}$
- (b)  $(\forall x \in \mathbb{Z})(x \in \mathbb{N} \vee x \leq 0)$  is false with  $x = 0$
- (c) Let  $P(x)$  be “ $x$  is divisible by 6”,  $Q(x)$  be “ $x$  is divisible by 2”,  $R(x)$  be “ $x$  is divisible by 3”. We have  $P(x) \implies Q(x) \vee R(x)$  that is true because 2 and 3 are factors of 6.
- (d) For all  $x$  in the set of integers,  $x$  is in the set of rational numbers, which is true because  $\mathbb{Z}$  is a proper subset of  $\mathbb{Q}$ .
- (e) For all  $x$  in the set of integers, if  $x$  is divisible by 2 or  $x$  is divisible by 3 is true, then  $x$  is divisible by 6, which is false with  $x = 2$ .
- (f) For all  $x$  in the set of natural numbers, if  $x$  is greater than 7, then there exists  $a$  and  $b$  in the set of natural numbers such that the sum of  $a$  and  $b$  is equal to  $x$ , which is true with  $x = 8, a = b = 4$ .

## 2. Truth Tables

(a) The two proposition forms are not logically equivalent.

$P$	$Q$	$P \wedge (Q \vee P)$	$P \wedge Q$
$T$	$T$	$T$	$T$
$T$	$F$	$T$	$F$
$F$	$T$	$F$	$F$
$F$	$F$	$F$	$F$

(b) The two proposition forms are logically equivalent.

$P$	$Q$	$R$	$(P \vee Q) \wedge R$	$(P \wedge R) \vee (Q \wedge R)$
$T$	$T$	$T$	$T$	$T$
$T$	$T$	$F$	$F$	$F$
$T$	$F$	$T$	$T$	$T$
$T$	$F$	$F$	$F$	$F$
$F$	$T$	$T$	$T$	$T$
$F$	$T$	$F$	$F$	$F$
$F$	$F$	$T$	$F$	$F$
$F$	$F$	$F$	$F$	$F$

(c) The two proposition forms are logically equivalent.

$P$	$Q$	$R$	$(P \wedge Q) \vee R$	$(P \vee R) \wedge (Q \vee R)$
$T$	$T$	$T$	$T$	$T$
$T$	$T$	$F$	$T$	$T$
$T$	$F$	$T$	$T$	$T$
$T$	$F$	$F$	$F$	$F$
$F$	$T$	$T$	$T$	$T$
$F$	$T$	$F$	$F$	$F$
$F$	$F$	$T$	$T$	$T$
$F$	$F$	$F$	$F$	$F$

### 3. Implication

N.B. An implication  $P \implies Q$  is only false when  $P$  is true and  $Q$  is false.

- (a)  $\forall x \forall y P(x, y) \implies \forall y \forall x P(x, y)$  is true.
- (b)  $\forall x \exists y P(x, y) \implies \exists y \forall x P(x, y)$  is false with the predicate  $P(x, y)$  being “the number  $x$  is greater than  $y$ ”.
- (c)  $\exists x \forall y P(x, y) \implies \forall y \exists x P(x, y)$  is true (source: StackExchange).
